AgencyReel helps you automate your social media and publication. It will also help you turn your clients into high paying ones and make more money with them. It will help you convert your content into social media content.

The Dashboard:

Here you can see a summary of your AgencyReel projects. If you click these individual boxes, you will be routed to each different feature landing pages.

   A.   The Client tab.

Create or Edit an existing client here. A "Client" is an entity created inside AgencyReel who's social media accounts you would be connecting with AgencyReel and managing publishing content on those. You can create multiple clients. Each "Client" will have their unique set of Social Media accounts and contents associated with them to help you manage better.
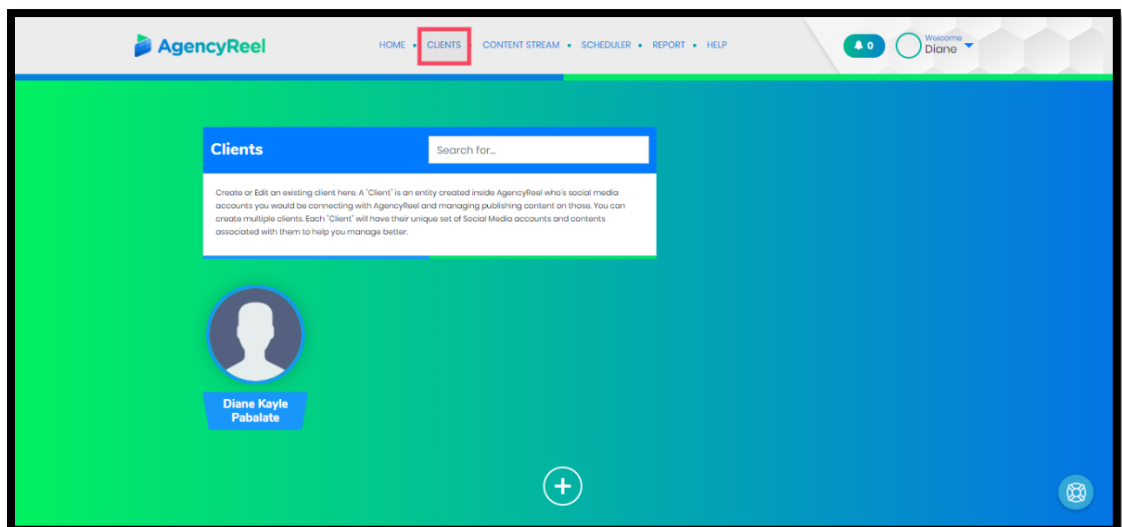

B. Content Stream

A "Content Stream" is a group of a type of content that will be used to publish on a social media account. You can create a "Content Stream" of GIF images and add all your GIF images in it. Same way, you can create a "Content Stream" of short videos and add all your short video clips in it.
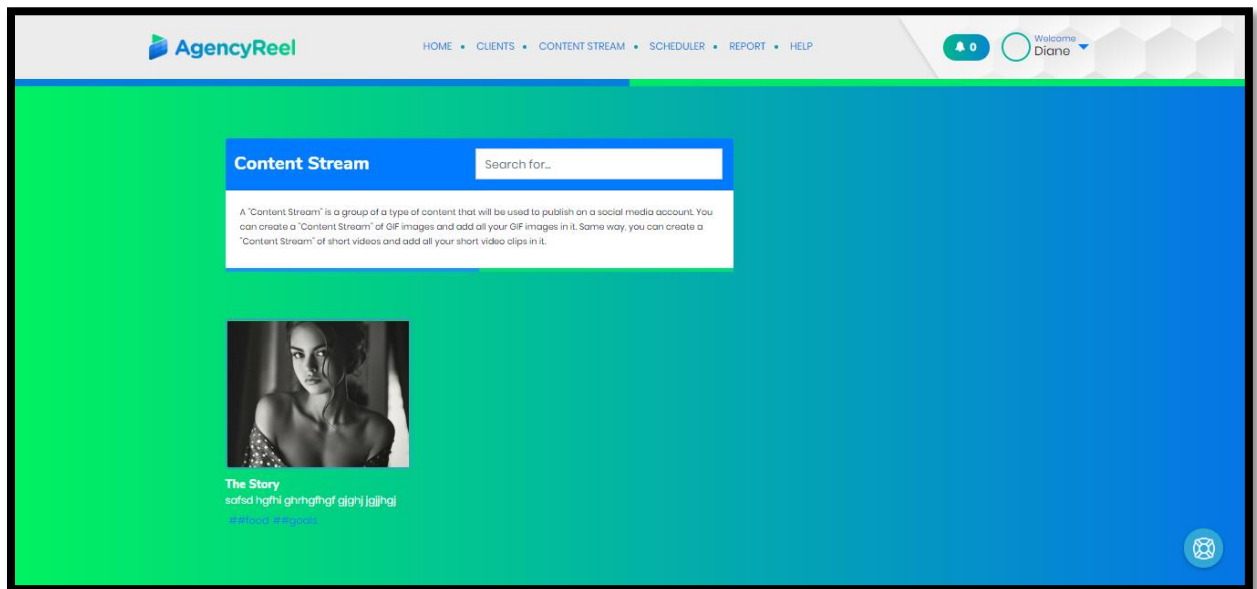

C. Scheduler

This will help you manage your posts effectively. It is a feature wherein you can add certain time slots for the day on when you'd like your content to be scheduled.
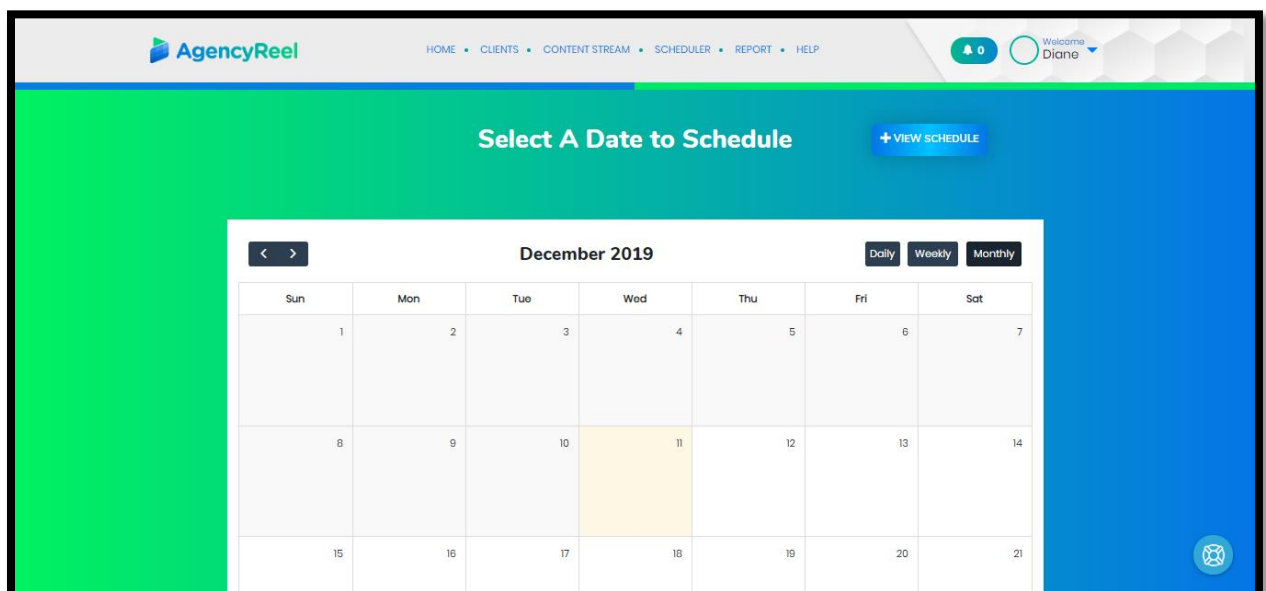

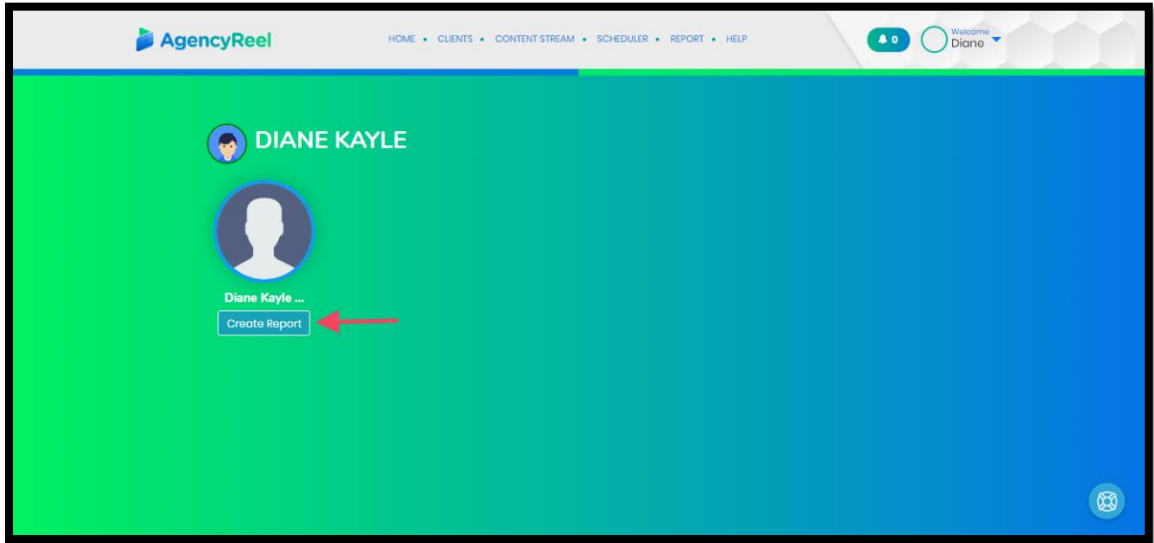

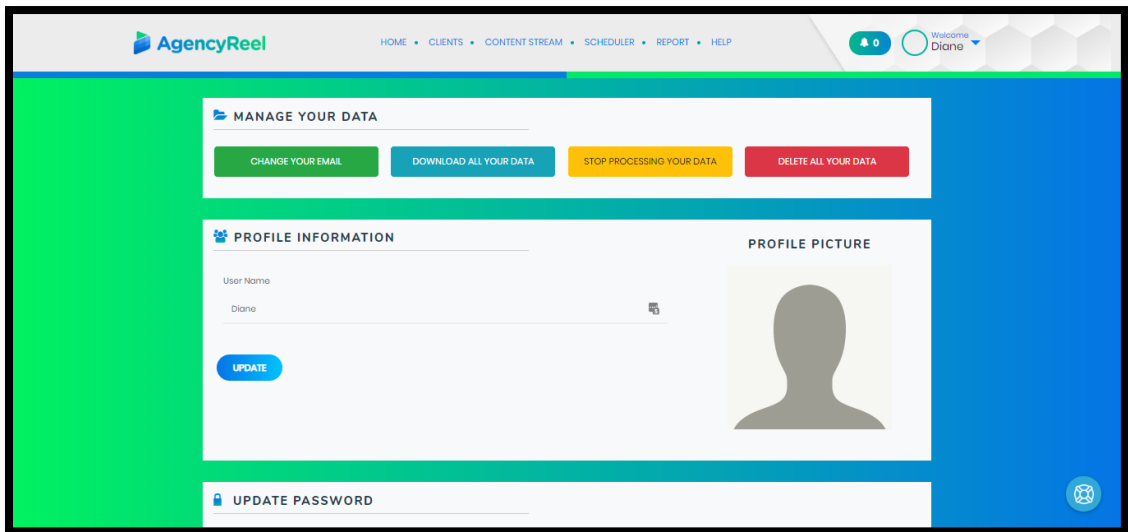

D. Report

Agency report contains the number of social accounts connected for that client, total schedules for that client and all other related details for that client.

The Profile Dropdown

A. My Account

Here you can change your profile settings such as your name, password and profile picture.

B. Lead Finder

Lead finder will help you find fresh leads for your niche. You can search for leads and narrow it down to your preferred location or category. You just need to enter a keyword, location, or radius to get a result. You can also choose a category related to your niche.
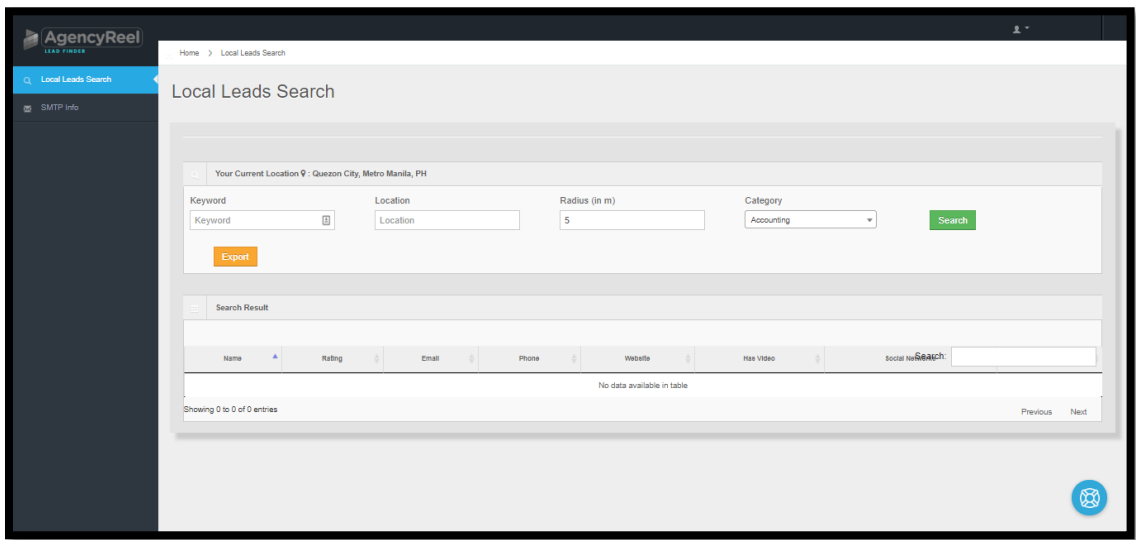

C. Content Creator

Content creator lets you create great videos and campaigns for you to post or stream to your social media accounts.
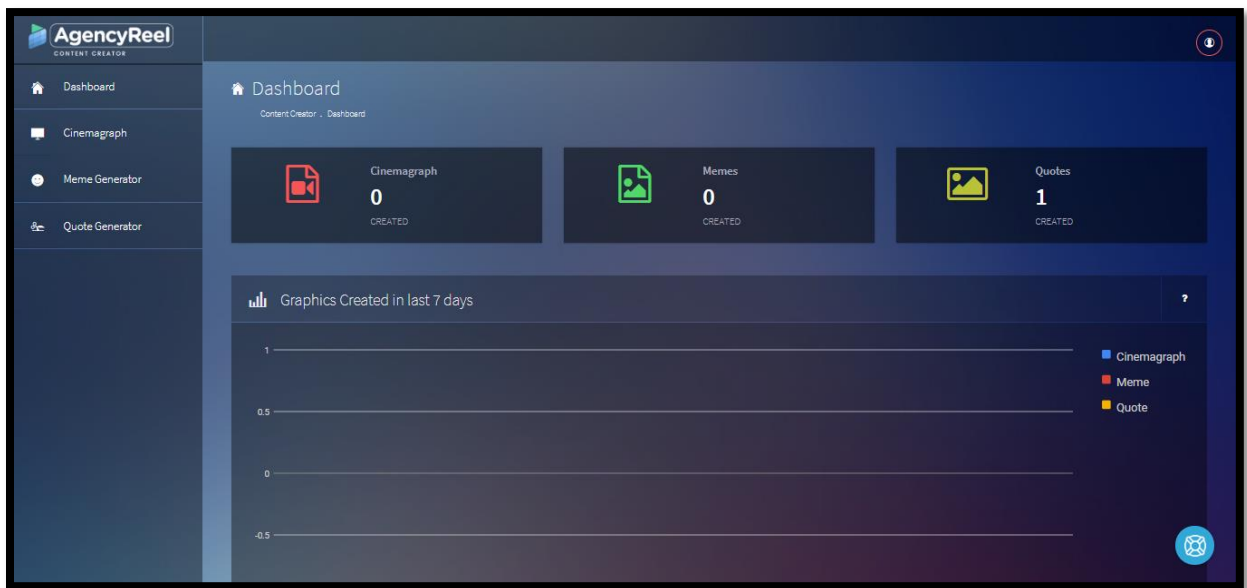

D. Tutorial

Here you will find PDF and video tutorials on how to use and maximize AgencyReel.
